

Astronomy Photographer of the Year: Prize-winning Images by Top Astrophotographers

This stunning collection of images from the Astronomy Photographer of the Year competition assembles the very best astrophotography from around the world. Organized by the Royal Observatory, the photographs capture an astounding range of astronomical phenomena both within our solar system and far into deep space. The book features four sections: Earth and Space, Our Solar System, Deep Space, and Overall Winners. The images are from the first six years of the competition (2009-2014), and include all the winners from each year along with a carefully curated selection from the shortlists. They are accompanied by notes from the judges and photographer, with background information and camera specifications. From giant storm systems in Jupiters atmosphere to the colorful, wispy remnants of a supernova explosion and the dazzling green curtain of the Northern Lights, Astronomy Photographer of the Year will appeal to both astrophotographers and beginners who simply enjoy gazing at the night sky.
