

# Digital Logic and Microprocessor Design with Interfacing (Activate Learning with these NEW titles from Engineering!)

Provide a solid foundation for designing digital logic circuits using DIGITAL LOGIC AND MICROPROCESSOR DESIGN WITH INTERFACING, 2E. This unique approach combines the use of logic principles and the building of individual components to create data paths and control units so students can build dedicated custom microprocessors and general-purpose microprocessors. Students design simple microprocessors, implement them in real hardware, and interface them to actual devices.
