

The New Craft of Intelligence: Achieving Asymmetric Advantage in the Face of Nontraditional Threats

This monograph is the third in the Strategic Studies Institutes Studies in Asymmetry Series. In it, the author examines two paradigm shifts--one in relation to the threat and a second in relation to intelligence methods-- while offering a new model for threat analysis and a new model for intelligence operations in support to policy, acquisition, and command engaged in nontraditional asymmetric warfare. He concludes with an examination of the Revolution in Military Affairs and the need for a Revolution in Intelligence Affairs.
